DUSTIN REED

SENIOR PRODUCT DESIGNER | MARKETPLACES, DESIGN SYSTEMS, PRODUCTION REACT

dustinreed.co | dr33d9@gmail.com | Naguabo, Puerto Rico, USA | US citizen, remote, Eastern-time hours | linkedin.com/in/dreeddesign

SUMMARY

Senior product designer and design engineer with 10+ years in design, the last 8 as founding product designer of CurbNTurf, a two-sided RV-camping marketplace on web, iOS, and Android. Partnered with the founder and engineers to grow host sign-ups 279% year over year (2023) to 500+ live listings at a 4.8 rating. I own work end to end, from research and flows to the design system and the production React/Next.js/TypeScript that ships it, including an OKLCH token system with automated WCAG AA contrast checks in CI. I prototype AI features in code against live model output and design how they fail gracefully.

EXPERIENCE

Founding Product Designer, CurbNTurf
Remote | Dec 2018 - Present

- Designed the brand identity, two-sided marketplace, and native iOS/Android apps for an RV and camping stay platform; now 500+ active listings at a 4.8 host rating.
- Drove a 2023 supply push that lifted host sign-ups 279% year over year; host growth has averaged about 90% a year since 2023.
- Designed self-serve host onboarding that removed sales dependency: landowners complete listing setup and go live independently.
- Designed the booking and checkout flow that captures the platform's 15% service fee, the company's only revenue stream.
- Rebuilt the design system in code: audited the palette (14 of 17 pairings failed contrast), rebuilt it as OKLCH design tokens, migrated surface by surface, and added a build check that fails below WCAG AA.
- Built production front end in Next.js, React, and TypeScript, shipping through pull requests reviewed by engineers; earlier shipped designs in Webflow so developers got working code, not static mockups.
- Led v2 redesign with AI-assisted host onboarding: prototyped in Claude Code against live model output, designed correction flows for model errors, and defined AI integration strategy for the platform.
- Led company-wide creative direction as CurbNTurf scaled to a 10-person team, working daily with the founder/CEO, engineers, and the field sales team, whose internal tools I designed.

Principal Designer, The Tink Tank (freelance studio, alongside CurbNTurf)
Remote | May 2018 - Present

- Client product and brand work for SaaS, healthcare, retail, and commerce companies, directing freelance designers and developers per project.
- InfoCon + LRS: Designed two brand identities and a self-serve quoting system for a large-print book manufacturer; an instant price estimator moved most B2B quote requests to self-serve, and the business tripled after launch.

Graphic Designer, Ivie
Boise, ID | Mar 2017 - Dec 2018

- Designed national in-store campaigns for Albertsons (Fortune 500 grocery retailer), concept through rollout across 2,000 stores.

Graphic Designer, Vital Sign & Graphics
Rexburg, ID | Jul 2015 - Dec 2016

Graphic Designer, Brigham Young University-Idaho
Rexburg, ID | Apr 2014 - Jun 2016

SKILLS

Product Design: zero-to-one, two-sided marketplaces, self-serve onboarding, design systems, iOS and Android, component libraries, IA and search for large catalogs, interactive prototypes, usability testing
Design Tools: Figma (components, variables, libraries), Adobe Illustrator
Front End: React, Next.js, TypeScript, Tailwind, CSS, design tokens, Playwright, GSAP, Webflow
AI: LLM APIs (Anthropic, OpenAI, Gemini), RAG, prompt and agent design, Claude Code, Cursor, Antigravity
Growth & Analytics: SEO, Google Ads, landing-page conversion, Amplitude
Brand & Creative: brand and identity, art direction, accessibility (WCAG AA)
Languages: English (Native), Spanish (Fluent)

EDUCATION

Brigham Young University-Idaho, Bachelor of Arts (BA), Graphic Design | Rexburg, ID | 2014 - 2016

PROJECTS

StickyFlow (2026): AI systems built in clients' own accounts: RAG chatbots, LLM API integrations, and agent workflows in custom code. Designed the interface layer for each, how agents surface reasoning, signal confidence, and recover from errors while keeping users in control.

Dominó Caribe (dominoes-zeta.vercel.app): A web game of Caribbean dominoes with Dominican, Puerto Rican, and Cuban rules, in Spanish and English, against bots or online with friends. Built in October 2026 with Claude Code in strict TypeScript: a pure rules engine, a written rules spec as the source of truth (the model asked when a rule was unclear instead of inventing one), and 607 automated tests.

Coqui Cardboard (coquicardboard.com): A 24,000-card sports-card catalog with command-palette search, built end to end in Next.js and Supabase. Search, filters, and catalog IA built from scratch for collectors who need to find specific cards fast.

Portfolio (dustinreed.co): Hand built. Designed a color control that rotates hue in OKLCH at constant relative luminance, preserving all 340 contrast ratios. Embedded WCAG AA enforcement in the design system with automated contrast checks that fail below the standard: accessibility as infrastructure, not audit.
